

Why Should Airports Have All the Fun? Bus and Rail Need Love too!

Meet Our Complete Solution for Intermodal Transit Leading Edge PIDS Services for 21st Century Transportation

Passengers have come to expect real time digital displays packed with information in the Airport, but are disappointed when other forms of transportation don't provide the same type of experience. It makes the experience feel dated and second-rate. No more! Our Intermodal solutions interface with most major interstate providers, local transit agencies, and other forms of transportation like bike sharing to create a seamless canopy of real-time information for visitors throughout your facility.

Bay / Gate

We can handle any type of bay or gate infrastructure and bring rich detailed information to passengers about departing routes in real time

Real Time Display

Lots of Schedules are NO PROBLEM! We can combine displays to hold as many departures as you need together with up to date delay information for riders

Wayfinding

Help passengers find their way in your facility with large easy to read dynamic wayfinding screens. Even integrate Sonar Beacons for Indoor Navigation

TransitPoint Intermodal PIDS Services

Message **Point**.TV

SERVICE OUTLINE

When you are planning your PIDS system for as complicated a facility as an Intermodal, it is natural to focus on the technology behind the service, and we've got that part well covered. Our systems are designed using next generation hybrid cloud architecture and smart reliable integrated controllers that can retrieve and cache real time information from multiple providers seamlessly. We support all major interstate transportation providers and have existing real time integrations with many of them.

With that covered though, the real challenge with any digital signage or private television network is keeping it functioning at its best and fed with compelling content. This is where projects too often fall apart over time. But, not with TransitPoint! We go beyond just selling and installing the system. We stay involved at whatever level you require to be your partner in successfully operating the system. Whether you simply need an experienced backup to your own team, or you want a fully managed system including content creation, monitoring and content/advertising management, we have you covered.

SERVICE LEVELS

Platform & Base Support

Got a great team in place and just want access to the full Transit Point Platform and priority access to our team for support on an on-demand basis? This is the service level for you. Even with this level, you can still access all our team's resources to back up your team if you need it!

Co-Managed Service

Got your content needs met, but don't want to have to maintain the I.T. resources to monitor and manage your network? With Co-Managed Services, MPM takes full responsibility for pro-actively monitoring and managing your network. In addition, you get access to a monthly budget of content adds, moves, and changes on your network.

Fully Managed Service

If you want a world-class digital signage and information network without any of the headaches, this is the level for you. We take care of everything in the Co-Managed level and add a monthly bundle of content creation services to handle all your images, animation, and video content needs to keep your network fresh and relevant. Don't worry though, we don't believe in locking you out of your own network. So, your authorized team members will have full access to your own systems, they just won't have to utilize it for your network to run on a day to day basis.

FEATURES

BROAD CHOICE OF DISPLAY TYPES

Why lock yourself into a single display technology? LCD, LED, even E-Ink displays, the TransitPoint CMS and Display Engine can handle them all. Let us help you pick the best technology for each location in your system to maximize usability, reliability, affordability, and visual quality.

MULTI-MODAL REAL TIME INFORMATION

The TransitPoint System can combine real time information from all your providers into one display or create individual displays per tenant. We can even handle Arrival/Departure, Gate Displays, Bay Signage, and Multi-Lingual Service Alerts both Visual & Audio for ADA Compliance

CONTENT CREATION AND MANAGEMENT

Message Point doesn't just sell and install systems and walk away. We provide the support you need to keep the systems running and stocked with fresh content that your agency can be proud of. If you have a strong existing design team, no worries, we can simply provide backup or niche capabilities. You don't have to use us, but we are always there when you do.
